Dear Resident,

GSBC GREEN WASTE CHIPPING SERVICE – DOLPHIN SANDS AND CAMBRIA DRIVE

Glamorgan Spring Bay Council will provide a green waste chipping and mulching service in the Dolphin Sands and Cambria Drive area on **Tuesday 17 and Wednesday 18 November 2026** to help residents manage vegetation as part of their bushfire mitigation efforts.

Residents interested in accessing this service are encouraged to register by **Friday 13 November 2026 by calling 6256 4777**. When registering, residents can arrange for the crew to visit their property during the scheduled service period.

Please provide the following information when registering:

- Your name, contact phone number and property address.
- The approximate location of your green waste pile on the property.
- Whether you would prefer the resulting wood chip to be removed or left on your property.

Preparing Your Green Waste

To help Council deliver the service safely and efficiently, residents are asked to prepare their green waste in advance and follow the guidelines below.

Timber and limb sizes

- **Green timber and limbs:** No more than 200 mm in diameter.
- **Dead or dry timber and limbs:** No more than 150 mm in diameter.
- **Maximum length:** All timber and limbs must be no longer than 3 metres.

Timber that exceeds this size limits will need to remain onsite and cannot be chipped.

Green waste pile requirements

Please place all green waste in **one pile or row per property**, located beside the driveway or access road so the crew can reach it with the chipper. Multiple smaller piles or rows cannot be accommodated.

Piles or rows should be arranged by hand rather than with machinery. This helps keep sand, rocks and other materials out of the green waste, reducing the risk of damage to the equipment.

Property access

To allow the crew to safely access your property, please ensure that:

- The driveway or access road is wide enough and in suitable condition for a small truck towing a chipper.
- There is enough space for the truck and chipper to turn around safely.
- Any locked gates are unlocked to allow access.

Keeping green waste free of contaminants

To protect the equipment and ensure the material can be processed, please make sure your green waste is free from rubbish and other contaminants, including:

- Plastic, concrete, rocks and other foreign materials.
- Steel, metal products, nails, screws and spikes.
- Construction timber and machine-sawn timber.

Thank You for your cooperation

We encourage residents to prepare their green waste in accordance with these guidelines before the scheduled visit. Material that does not meet the requirements will be left onsite and cannot be chipped.

Council appreciates the community's cooperation and participation in this service, which supports residents in managing vegetation on their properties as part of their bushfire preparedness efforts.

Yours sincerely,

Nick McGuire
CHIEF EXECUTIVE OFFICER
